Past performance is not indicative of future results. An investment's return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Performance data as of the most recent month-end may be obtained by visiting our website, arielinvestments.com.

Dear Clients and Friends: All major U.S. indices posted gains in the third quarter with the economy demonstrating resilience and forecasters increasingly convinced of a soft landing. With inflation under control and the Fed's interest rate cuts underway, the market remained buoyant. In a leadership reversal, value stocks beat growth shares, small companies outperformed the big guys and Technology sector dominance was dethroned by a broadening rally. Against this shifting backdrop, Ariel Fund beat its benchmarks. Meanwhile, Ariel Appreciation Fund lagged its value index while edging ahead of the core.

More is Less

The staggering differential between the returns of large and small companies (as well as their respective growth and value counterparts) has resulted in growing speculation about the future of small cap investing. As natural contrarians, nothing gets us more excited than the "this time is different" crowd re-emerging to ponder the potential demise of a leading asset class that has stood the test of time. We believe the negative sentiment engulfing increasingly orphaned small and mid-cap stocks presents a rare opportunity for long-term investors.

From 1926 through 2010, small cap stocks solidly outperformed large company shares. This result is both logical and unsurprising. For one, math anchored to a smaller base is more significant. To this point, expanding from one location to two represents 50% growth—whereas multiplying from ten to eleven stores represents 10% growth. As companies get bigger, it is harder to grow because incremental progress on a large scale becomes less and less powerful. Meanwhile, sustained advancements on a large scale can be statistically compelling (i.e. Apple) but hard to come by.

As we all know, markets are also efficient. This means the more misunderstood, ignored and underfollowed a name, the more likely its shares can be mispriced. Since smaller companies often fly under Wall Street’s radar and big issues generally receive a great deal of investor attention, the probability of finding an undervalued opportunity is higher at the smaller end of the market. This is increasingly true in today’s environment where buy side neglect and dwindling analyst coverage of small and mid-cap companies is more pronounced than we have ever seen.

A closer look shows small and large cap leadership has ebbed and flowed since the stock market’s modern-day beginnings. But when compounded returns are considered, small cap shares have outperformed all other public equities for over 80 years as depicted below.

Stock Market Performance Since 1926

Source: Morningstar Direct

Sure, there have been periods as recent as the end of the last century when large cap stocks dominated, but nothing compares to the current era that started in 2010 and represents the longest period of small cap underperformance on record. The magnitude and duration of the return disparities are shown on below.

Performance (%) as of 9/30/2024	Annualized					
	YTD	1-Year	3-Year	5-Year	10-Year	Since 2011
Large Cap Growth	+24.55	+42.19	+12.02	+19.74	+16.52	+16.18
Small/Mid Cap Value	+11.28	+26.59	+6.06	+9.98	+8.47	+9.53
Small Cap Value	+9.22	+25.88	+3.77	+9.28	+8.22	+8.71
<i>Small/Mid Cap Value vs Large Cap Growth</i>	<i>(13.27)</i>	<i>(15.60)</i>	<i>(5.96)</i>	<i>(9.76)</i>	<i>(8.05)</i>	<i>(6.65)</i>
<i>Small Value vs Large Cap Growth</i>	<i>(15.33)</i>	<i>(16.31)</i>	<i>(8.25)</i>	<i>(10.46)</i>	<i>(8.30)</i>	<i>(7.47)</i>

Small Time

As the big have gotten bigger, market cap weighted indexes have become excessively concentrated in a few names. As a result, the largest 10% of publicly traded companies represent nearly 82% of the total value of the U.S. stock market¹, the narrowest breadth since the Great Depression². Money pouring into passive index funds and momentum trading exacerbate inefficiencies, creating opportunities for contrarian, fundamental investors like Ariel.

Admittedly it is early days, but the leadership baton may have been passed in the third quarter as market performance broadened beyond the mega-cap tech darlings of the day. Not only did small caps outperform, but there was also a notable shift towards value. With large cap valuations near historic highs, we see a compelling opportunity to invest in a market cohort offering greater return potential for years to come. To this point, large cap growth stocks currently trade at 28.5x earnings compared to a 20-year historical average of 19.2x³. Meanwhile, earnings growth for the Russell 2000 Value Index is expected to outpace that of the Russell 1000 Growth Index as well as the Russell 3000 Index over the next two years. This dynamic could ignite a reversal of fortune between market leaders and laggards.

A growing U.S. economy, moderating inflation, modest unemployment and falling interest rates also increase our optimism. Small cap stocks typically benefit from lower borrowing costs and the associated economic growth monetary easing can generate. Furthermore, subdued valuations, strong balance sheets and a hopefully less onerous regulatory environment could set the stage for an acceleration in M&A activity as companies look to boost growth. Additionally, private equity dry powder and their need for portfolio exits could also heighten interest in small and mid-sized companies as the valuation gap between private and public markets eventually narrows.

We have been navigating smaller company markets for nearly 42 years. Today, there is a wide dispersion in the quality of small cap companies with some carrying high levels of debt and/or failing to generate earnings. Contrasting fundamentals could increase volatility, presenting skilled stock pickers with ample opportunity to drive returns. And inevitably, the hefty growth and profitability of the large cap market darlings will moderate. Whether or not a sustainable shift is in fact underway, investing in high quality, differentiated businesses with durable competitive advantages, strong balance sheets and high returns on equity has historically generated strong long-term returns with less volatility.

The cycles of smaller company versus large company sentiment have always come and gone. Periods of extreme dislocation and large cap dominance, while painful, have historically been followed by strong reversals and longer periods of smaller company outperformance. As inefficiencies build and returns are captured, capital will eventually return to the asset class. We believe the strong underlying fundamentals of our portfolios are hard to ignore and bode well for years to come.

Portfolio Comings and Goings

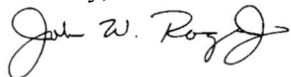

During the third quarter, we purchased two positions in Ariel Fund: **Bio-Rad Laboratories Inc. (BIO)**, manufacturer and developer of laboratory equipment and biological testing, and former holding **The Middleby Corporation (MIDD)**, which is a leading food equipment manufacturer. Bio-Rad boasts a solid financial profile, rising operating margins as well as high and recurring revenue streams. It is a classic Ariel stock,

offering leading innovative products in a growing global marketplace. Longer term, MIDD's differentiated brands and focus on innovation should enable the company to benefit from secular demand for more automation and efficiency in the food service industry. Meanwhile, we sold waste management services provider **Stericycle, Inc. (SRCL)** on the news of its acquisition.

We did not purchase any new holdings in Ariel Appreciation Fund during the period. However, we sold waste management services provider Stericycle, Inc. on the news of its acquisition. We also exited retail drugstore operator, **Walgreens Boots Alliance, Inc. (WBA)** to harvest losses for tax purposes.

Sincerely,

John W. Rogers, Jr.
Chairman and Co-CEO

Mellody Hobson
Co-CEO and President

Investing in small- and mid-cap companies is riskier and more volatile than investing in large-cap companies. The intrinsic value of the stocks in which the Funds invest may never be recognized by the broader market. The Funds are often concentrated in fewer sectors than their benchmarks, and their performance may suffer if these sectors underperform the overall stock market. Investing in equity stocks is risky and subject to the volatility of the markets.

Per the Ariel Fund's Prospectus as of February 1, 2024, the Investor Class and Institutional Class had an annual expense ratio of 0.99% and 0.68% respectively. Per the Ariel Appreciation Fund's Prospectus as of February 1, 2024, the Investor Class and Institutional Class had an annual expense ratio of 1.13% and 0.82%, respectively.

The Russell 2500™ Value Index measures the performance of the small to mid-cap value segment of the U.S. equity universe. It includes those Russell 2500 companies with relatively lower price-to-book ratios, lower forecasted growth values and lower sales per share historical growth. Its inception date is July 1, 1995. The Russell 2500™ Index measures the performance of the small to mid-cap segment of the U.S. equity universe, commonly referred to as "smid" cap. The Russell 2500 Index is a subset of the Russell 3000® Index. It includes approximately 2500 of the smallest securities based on a combination of their market cap and current index membership. Its inception date is June 1, 1990.

The Russell Midcap® Value Index measures the performance of the mid-cap value segment of the U.S. equity universe. It includes those Russell Midcap Index companies with lower price-to-book ratios, lower forecasted growth values, and lower sales per share historical growth. Its inception date is February 1, 1995. The Russell Midcap® Index measures the performance of the mid-cap segment of the U.S. equity universe. The Russell Midcap Index is a subset of the Russell 1000® Index. It includes approximately 800 of the smallest securities based on a combination of their market cap and current index membership. Its inception date is November 1, 1991. The Russell 1000® Growth Index measures the performance of the large cap growth segment of the US equity universe. It includes those Russell 1000 companies with relatively higher price-to-book ratios, higher I/B/E/S forecast medium term (2 year) growth and higher sales per share historical growth (5 years). Its inception date is January 1, 1987.
